

Made By Damasteel®

Damasteel® is the only manufacturer in the world that makes a stainless Damascus patterned steel via powder metallurgy. Our skilled blacksmiths have a genuine knowledge of both steel production and design. In their eyes, the beauty of the steel is just as important as its function.

Damasteel® is a family-owned company. We have our forge in the heart of Sweden's steel industry, the small mill town of Söderfors. In this scenic environment, steel has been manufactured since 1676. Damasteel® has a world patent on manufacturing a stainless Damascus steel, using powder metallurgy.

Why choose Damasteel®?

Damasteel® is the best performing stainless Damascus patterned steel in the world using the latest gas-atomized PM technology with very high cleanliness. It has incomparable toughness and strength combined with excellent edge retention and corrosion resistance. This allows for a very user friendly Damascus patterned steel that is made to be used.

- Patented Powder Metallurgy product
- Solid Steel Technology™ resulting in a homogenous product
- Highest cleanliness with no inclusions
- Incomparable toughness and strength
- Excellent edge retention and corrosion resistance
- Superior edge sharpness and cutting ability
- Top quality and easy to work with ensures perfect result
- Best overall performing stainless Damascus patterned steel
